Typical Floor Support.....	223

Rail Systems

ZRAT Aluminum Rail & Components

Engineering Data for ZRAT Aluminum Rail

1. All rail and hangers must be installed in accordance with **Ingersoll Rand** instructions. See Overhead Rail System Installation, Operation, and Maintenance Manual (MHD56159)
2. ZRAT Rail is made of high strength aluminum alloy extrusion.
3. The rail or bridge beam provided is modular design, weld free application, and self aligning with complete bolt-together capability at all splice joints and hangers.
4. All rail sections provided are saw cut square to required length by **Ingersoll Rand**. All rail joints should be flush when installation is completed.
5. The capacity of the rail, monorail or bridge crane will be determined so that deflection under rated load shall not exceed 1/450 of the span. Lateral deflection will not be accepted.
6. The allowable stresses applied must not exceed 20% of the **minimum yield strength** of the materials used.
7. The maximum capacity for all rail provided by the contractor including hoist, product, process equipment, and all attachments, etc, must not exceed the capacity specified below: ZRAT Aluminum Rail – acceptable for maximum capacities up to and including 500 lbs (226.8 kg).
8. For bridge crane or hoist application(s), the maximum overhang of the bridge girder to the centre of a runway rail, must not exceed 12.00" (304.8 mm). (For larger overhangs consult the factory).
9. All bridge cranes, runway and monorail, must be installed straight, parallel, level and at the same elevation. Installation tolerance cannot exceed the values specified below:
 - a. **Longitudinal leveling.** Multiple runways and single rail systems 0.25"(6.3 mm) in overall length, with a maximum rate of change of no more than 0.12"(3.0 mm) on 20 ft (6 m) centers.
 - b. **Elevation runway to runway.** 0.25"(6.35 mm) in span, maximum rate of change 0.12" (3.0 mm) on 20 ft (6 m) centers.
 - c. **Centering to runway to runway.** 0.25" (6.3 mm) in overall length, maximum rate of change 0.12" (3.17 mm) on 20 ft (6 m) centers.
 - d. **Centering for single rail.** to a parallel conveyor of workstation will be $\pm 0.50"$ (12.7 mm) in overall length of the system, maximum rate of change 0.12" (3.17 mm) on 20 ft (6 m) centers.
10. Sway bracing should be used when the hanger meets or exceeds 24.00"(609.6 mm) in length. (See system installation manual).
11. One month after system buy off, the enclosed rail system should be inspected and re-leveled by the installation contractor. All bolts at the splice joints, hangers and support structure should be re-checked for proper torque. Abnormalities noted by the inspector must be reported to **Ingersoll Rand** immediately.
12. All splice connections shall not exceed 12.00"(304.8 mm) from the hanger points.
13. All trolley running surfaces must be aligned flush in accordance with his specification and present no shock loading at splice connections. Transverse tilt will not be accepted
14. Tension tubes at all splice connections will be aligned and welded by **Ingersoll Rand**.
15. Joint modification or holes required in track section(s) will be by drilling or saw cutting only. Flame cutting of holes or splice joints is not permitted.
16. Where hanger rods are used, the allowable stress will be 20% of the minimum yield strength of the material provided.
17. All hangers must be installed true and vertical. All suspension fitting should bear the load equally.
18. All bolts, nuts, fasteners, attachments etc, required for enclosed rail systems will be provided by **Ingersoll Rand**.
19. All double girder bridge cranes provided will incorporate diagonal bracing for parallel stabilization.

Trolleys

1. All trolleys are manufactured by **Ingersoll Rand**.
2. All aluminum trolleys consist of high tensile aluminum alloy body.
3. All steel trolleys consist of a welded, stamped steel body.
4. All trolley wheels provided for hoists, bridge cranes, and related equipments must conform to **Ingersoll Rand** standards.
5. Trolley wheels are delrin, with sealed precision ground ball bearings permanently molded in. All trolley wheels mount to an axle that is press-fitted into the trolley body.
6. Trolley side guide rollers are delrin machined symmetrically true with the axis.
7. All trolleys are equipped with safety lugs so in the event of a wheel failure the trolley cannot come out of the rail.
8. All bearings are protected by grease and dust seals.

How to Order • ZRAT Aluminum Runway or Monorail

$$\begin{aligned} \text{MOMENT OF INERTIA: } I_{xx} &= 2.206 \text{ IN}^4 [9.182\text{E5 mm}^4] \\ I_{yy} &= 1.348 \text{ IN}^4 [5.611\text{E5 mm}^4] \end{aligned}$$

PART NUMBER:

[31000]-[150]

INDICATES LENGTH OF RAIL IN FEET (150 = 15 FEET)

INDICATES RAIL PROFILE

NOTE: ALL RUNWAY RAIL WILL BE DRILLED FOR BOTH END STOPS AND SPLICE HOLES.

Standard Lengths • ZRAT/Part No. 31000 - XXX

Bridge Crane Assembly • Example of How to Order

THE BRIDGE CRANE ASSEMBLY CONSISTS OF:

- ONE BRIDGE BEAM (SECTION OF RAIL)
- TWO END TRUCK ASSEMBLIES (MOUNTED TO THE BRIDGE WITH A TROLLEY TO ROLL INSIDE OF THE RUNWAY, SAFETY CABLES WILL BE PRE-INSTALLED)
- TWO END STOPS (ONE INSTALLED AT EACH END OF THE BRIDGE)
- REDUNDANT END STOPS ARE AVAILABLE (PLEASE SPECIFY)

EXAMPLE

ORDER NUMBER:

ZRAT 06 08 31059 R

- REDUNDANT END STOP (OPTIONAL)** (indicated by 'R')
- END TRUCK ASSEMBLY** (indicated by '31059')
- TOTAL BRIDGE LENGTH (IN FEET)** (indicated by '08')
- SPAN (RUNWAY CENTER-CENTER DIMENSION IN FEET)** (indicated by '06')
- TYPE OF BRIDGE RAIL** (indicated by 'ZRAT')

Balancer Stack-up Dimension • For ZRAT Aluminum Rail

Rail Systems

ZRA1 Aluminum Rail & Components

Engineering Data for ZRA1 Aluminum Rail

1. All rail and hangers must be installed in accordance with **Ingersoll Rand** instructions.
2. Rail provided is ZRA1 aluminum alloy.
3. The rail or bridge beam provided is modular design, weld free application, and self aligning with complete bolt-together capability at all splice joints and hangers.
4. All rail sections provided are saw cut square to required length by **Ingersoll Rand**. All rail joints should be flush when installation is completed.
5. The capacity of the rail, monorail or bridge crane will be determined so that deflection under rated load shall not exceed 1/450 of the span. Lateral deflection will not be accepted.
6. The allowable stresses applied must not exceed 20% of the **minimum yield strength** of the materials used.
7. The maximum capacity for all rail provided by the contractor including hoist, product, process equipment, and all attachments, etc, must not exceed the capacity specified below: ZRA1 Aluminum Rail-acceptable for maximum capacities up to and including 500 lbs (226.8 kg).
8. For bridge crane or hoist application(s), the maximum overhang of the bridge girder to the centre of a runway rail, must not exceed 12.00"(304.8 mm). (For larger overhangs consult the factory).
9. All bridge cranes, runway and monorail, must be installed straight, parallel, level and at the same elevation. Installation tolerance cannot exceed the values specified below:
 - a. **Longitudinal leveling.** Multiple runways and single rail systems 0.25"(6.35 mm) in overall length, with a maximum rate of change of no more than 0.12"(3.04 mm) on twenty-foot centers.
 - b. **Elevation runway to runway.** 0.25"(6.3 mm) in span, maximum rate of change 0.12"(3.04 mm) on twenty-foot centers.
 - c. **Centering to runway to runway.** 0.25"(6.3 mm) in overall length, maximum rate of change 0.12"(3.04 mm) on twenty-foot centers.
 - d. **Centering for single rail.** to a parallel conveyor of workstation will be $\pm 0.50"$ (12.7 mm) in overall length of the system, maximum rate of change 0.12"(3.04 mm) on twenty-foot centers.
10. Sway bracing should be used when the hanger meets or exceeds 24.00"(609.6 mm) in length. (See system installation manual.)
11. One month after system buy off, the enclosed rail system should be inspected and re-leveled by the installation contractor. All bolts at the splice joints, hangers and support structure should be re-checked for proper torque. Abnormalities noted by the inspector must be reported to **Ingersoll Rand** immediately.
12. All splice connections shall not exceed 12.00"(304.8 mm) from the hanger points.
13. All trolley running surfaces must be aligned flush in accordance with his specification and present no shock loading at splice connections. Transverse tilt will not be accepted
14. Tension tubes at all splice connections will be aligned and welded by **Ingersoll Rand**.
15. Joint modification or holes required in track section(s) will be by drilling or saw cutting only. Flame cutting of holes or splice joints is not permitted.
16. Where hanger rods are used, the allowable stress will be 20% of the minimum yield strength of the material provided.
17. All hangers must be installed true and vertical. All suspension fitting should bear the load equally.
18. All bolts, nuts, fasteners, attachments etc, required for enclosed rail systems will be provided by **Ingersoll Rand**.
19. All double girder bridge cranes provided will incorporate diagonal bracing for parallel stabilization.

Curved Rail

1. Enclosed rail turns will be pre-formed by **Ingersoll Rand**. All tension tubes will be aligned and installed by **Ingersoll Rand**.
2. The radius of all enclosed rail turns will be designed to allow the carriers or trolleys to freely negotiate each horizontal turn without binding.
3. The minimum radius for ZRA1 aluminum rail is 36.00"(914.4 mm).
4. Short radius turns with a radius that is less than the standard specified above must be pre-approved by **Ingersoll Rand**.
5. The maximum overhang of a straight track to the tangent point of a horizontal turn cannot exceed 12.00"(304.8 mm).

6. A minimum of two hangers should be used in the radius of each 90-degree turn, the two hangers should be in addition to one hanger at each splice joint. The maximum distance between hanger centers cannot exceed 36.00"(914.4 mm). If required, additional hangers can be provided in accordance with the design and calculated distance based on the trolley or carrier loading.
7. Special curves will be supported and braced in accordance with **Ingersoll Rand** requirements. Under no condition will rail hanger center exceed 36.00"(914.4 mm).
8. Curved rail sections will be installed with uniform bolt tension to insure that the load trolley do not bind at splice joints.
9. A straight section of rail will be provided between each horizontal turn. For single trolley systems the length will be 12.00"(304.8 mm), for dual trolley systems the length will be 28.00"(711.2 mm).
10. All hangers provided must be installed true to the vertical plane.

Trolleys

1. All trolleys are manufactured by **Ingersoll Rand**.
2. All aluminum trolleys consist of high tensile aluminum alloy body.
3. All steel trolleys consist of a welded, stamped steel body.
4. All trolley wheels provided for hoists, bridge cranes, and related equipments must conform to **Ingersoll Rand** standards.
5. Trolley wheels are delrin, with sealed precision ground ball bearings permanently molded in. All trolley wheels mount to an axle that is press-fitted into the trolley body.
6. Trolley side guide rollers are delrin machined symmetrically true with the axis.
7. All trolleys are equipped with safety lugs so in the event of a wheel failure the trolley cannot come out of the rail.
8. All bearings are protected by grease and dust seals.

How to Order • ZRA1 Aluminum Runway or Monorail

MOMENT OF INERTIA: $I_{yy} = 2.80 \text{ IN}^4 [1.16\text{E}6 \text{ mm}^4]$

$I_{xx} = 6.81 \text{ IN}^4 [2.83\text{E}6 \text{ mm}^4]$

EXAMPLE

Bridge Crane Assembly • Example of How to Order

THE BRIDGE CRANE ASSEMBLY CONSISTS OF:

- ONE BRIDGE BEAM (SECTION OF RAIL)
- TWO END TRUCK ASSEMBLIES (MOUNTED TO THE BRIDGE WITH A TROLLEY TO ROLL INSIDE OF THE RUNWAY, SAFETY CABLES WILL BE PRE-INSTALLED)
- TWO END STOPS (ONE INSTALLED AT EACH END OF THE BRIDGE)
- REDUNDANT END STOPS ARE AVAILABLE (PLEASE SPECIFY)

EXAMPLE

ORDER NUMBER:

ZRA1 06 08 30283 R

- REDUNDANT END STOP (OPTIONAL)**: Indicated by the 'R' at the end of the order number.
- END TRUCK ASSEMBLY**: Indicated by the '08' in the order number.
- TOTAL BRIDGE LENGTH (IN FEET)**: Indicated by '30283' in the order number.
- SPAN (RUNWAY CENTER-CENTER DIMENSION IN FEET)**: Indicated by '06' in the order number.
- TYPE OF BRIDGE RAIL**: Indicated by 'ZRA1' in the order number.

Rail Systems

ZRA2 Aluminum Rail & Components

Engineering Data for ZRA2 Aluminum Rail

1. All rail and hangers must be installed in accordance with **Ingersoll Rand** instructions.
2. Rail provided is ZRA2 aluminum alloy.
3. The rail or bridge beam provided is modular design, weld free application, and self aligning with complete bolt-together capability at all splice joints and hangers.
4. All rail sections provided are saw cut square to required length by **Ingersoll Rand**. All rail joints should be flush when installation is completed.
5. The capacity of the rail, monorail or bridge crane will be determined so that deflection under rated load shall not exceed 1/450 of the span. Lateral deflection will not be accepted.
6. The allowable stresses applied must not exceed 20% of the **minimum yield strength** of the materials used.
7. The maximum capacity for all rail provided by the contractor including hoist, product, process equipment, and all attachments, etc, must not exceed the capacity specified below: ZRA2 Aluminum Rail-acceptable for maximum capacities up to and including 2000 lbs(907.18 kg).
8. For bridge crane or hoist application(s), the maximum overhang of the bridge girder to the centre of a runway rail, must not exceed 12.00"(304.8 mm). (For larger overhangs consult the factory).
9. All bridge cranes, runway and monorail, must be installed straight, parallel, level and at the same elevation. Installation tolerance cannot exceed the values specified below:
 - a. **Longitudinal leveling.** Multiple runways and single rail systems 0.25"(6.3 mm) in overall length, with a maximum rate of change of no more than 0.12"(3.0 mm) on twenty-foot centers.
 - b. **Elevation runway to runway.** 0.25"(6.3 mm) in span, maximum rate of change 0.12"(3.0 mm) on twenty-foot centers.
 - c. **Centering to runway to runway.** 0.25"(6.3 mm) in overall length, maximum rate of change 0.12"(3.0 mm) on twenty-foot centers.
 - d. **Centering for single rail.** to a parallel conveyor of workstation will be $\pm 0.50"$ (12.7 mm) in overall length of the system, maximum rate of change 0.12"(3.0 mm) on twenty-foot centers.
10. Sway bracing should be used when the hanger meets or exceeds 24.00"(609.6 mm) in length. (See system installation manual.)
11. One month after system buy off, the enclosed rail system should be inspected and re-leveled by the installation contractor. All bolts at the splice joints, hangers and support structure should be re-checked for proper torque. Abnormalities noted by the inspector must be reported to **Ingersoll Rand** immediately.
12. All splice connections shall not exceed 12.00"(304.8 mm) from the hanger points.
13. All trolley running surfaces must be aligned flush in accordance with his specification and present no shock loading at splice connections. Transverse tilt will not be accepted
14. Tension tubes at all splice connections will be aligned and welded by **Ingersoll Rand**.
15. Joint modification or holes required in track section(s) will be by drilling or saw cutting only. Flame cutting of holes or splice joints is not permitted.
16. Where hanger rods are used, the allowable stress will be 20% of the minimum yield strength of the material provided.
17. All hangers must be installed true and vertical. All suspension fitting should bear the load equally.
18. All bolts, nuts, fasteners, attachments etc, required for enclosed rail systems will be provided by **Ingersoll Rand**.
19. All double girder bridge cranes provided will incorporate diagonal bracing for parallel stabilization.

Trolleys

1. All trolleys are manufactured by **Ingersoll Rand**.
2. All aluminum trolleys consist of high tensile aluminum-magnesium alloy body.
3. All steel trolleys consist of a welded, stamped steel body.
4. All trolley wheels provided for hoists, bridge cranes, and related equipment must conform to **Ingersoll Rand** standards.
5. Trolley wheels are delrin, machined symmetrically true with axis. All trolley wheels are retainer type, designed for a single row of high quality, precision-ground ball bearings. All trolley wheels have a stud that is press-fitted into trolley body.
6. Trolley side guide rollers are delrin machined symmetrically true with the axis.
7. All trolleys are equipped with safety lugs so in the event of a wheel failure the trolley cannot come out of the rail.
8. All bearings are protected by grease and dust seals.

How to Order • ZRA2 Aluminum Runway or Monorail

MOMENT OF INERTIA: $I_{yy} = 14.05 \text{ IN}^4 [5.84\text{E}6 \text{ mm}^4]$

$I_{xx} = 28.06 \text{ IN}^4 [11.6\text{E}6 \text{ mm}^4]$

Bridge Crane Assembly • Example of How to Order

THE BRIDGE CRANE ASSEMBLY CONSISTS OF:

- ONE BRIDGE BEAM (SECTION OF RAIL)
- TWO END TRUCK ASSEMBLIES (MOUNTED TO THE BRIDGE WITH A TROLLEY TO ROLL INSIDE OF THE RUNWAY, SAFETY CABLES WILL BE PRE-INSTALLED)
- TWO END STOPS (ONE INSTALLED AT EACH END OF THE BRIDGE)
- REDUNDANT END STOPS ARE AVAILABLE (PLEASE SPECIFY)

EXAMPLE

ORDER NUMBER:

ZRA2 06 08 30283 R

- REDUNDANT END STOP (OPTIONAL)**: Corresponds to the 'R' in the order number.
- END TRUCK ASSEMBLY**: Corresponds to the '08' in the order number.
- TOTAL BRIDGE LENGTH (IN FEET)**: Corresponds to the '30283' in the order number.
- SPAN (RUNWAY CENTER-CENTER DIMENSION IN FEET)**: Corresponds to the '06' in the order number.
- TYPE OF BRIDGE RAIL**: Corresponds to the 'ZRA2' in the order number.

Notes:

Rail Systems

ZRS2/3 Steel Rail & Components

Engineering Data for ZRS2/3 Steel Rail

1. All rail and hangers must be installed in accordance with **Ingersoll Rand** instructions.
2. Rail provided is ZRS2/3 steel.
3. The rail or bridge beam provided is modular design, weld free application, and self aligning with complete bolt-together capability at all splice joints and hangers.
4. All rail sections provided are saw cut square to required length by **Ingersoll Rand**. All rail joints should be flush when installation is completed.
5. The capacity of the rail, monorail or bridge crane will be determined so that deflection under rated load shall not exceed 1/450 of the span. Lateral deflection will not be accepted.
6. The allowable stresses applied must not exceed 20% of the **minimum yield strength** of the materials used.
7. The maximum capacity for all rail provided by the contractor including hoist, product, process equipment, and all attachments, etc, must not exceed the capacity specified below: ZRS2 Steel Rail – acceptable for maximum capacities up to and including [2000 lbs.(907.18 kg)]. ZRS3 Steel Rail - acceptable for maximum rated load up to and including [3000 lbs.(1360.77 kg)].
8. For bridge crane or hoist application(s), the maximum overhang of the bridge girder to the centre of a runway rail, must not exceed 12.00”(304.8 mm). (For larger overhangs consult the factory).
9. All bridge cranes, runway and monorail, must be installed straight, parallel, level and at the same elevation. Installation tolerance cannot exceed the values specified below:
 - a. **Longitudinal leveling.** Multiple runways and single rail systems 0.25”(6.3 mm) in overall length, with a maximum rate of change of no more than 0.12”(3.0 mm) on twenty-foot centers.
 - b. **Elevation runway to runway.** 0.25”(6.3 mm) in span, maximum rate of change 0.12”(3.0 mm) on twenty-foot centers.
 - c. **Centering runway to runway.** 0.50”(12.7 mm) in overall length, maximum rate of change 0.12”(3.0 mm) on twenty-foot centers.
 - d. **Centering for single rail.** to a parallel conveyor of workstation will be ± 0.50 ”(12.7 mm) in overall length of the system, maximum rate of change 0.12”(3.0 mm) on twenty-foot centers.
10. Sway bracing should be used when the hanger meets or exceeds 24.00”(609.6 mm) in length. (See system installation manual.)
11. One month after system buy off, the enclosed rail system should be inspected and re-leveled by the installation contractor. All bolts at the splice joints, hangers and support structure should be re-checked for proper torque. Abnormalities noted by the inspector must be reported to **Ingersoll Rand** immediately.
12. All trolley running surfaces must be aligned flush in accordance with his specification and present no shock loading at splice connections. Transverse tilt will not be accepted.
13. Tension tubes at all splice connections will be aligned and welded by **Ingersoll Rand**.
14. Joint modification or holes required in track section(s) will be by drilling or saw cutting only. Flame cutting of holes or splice joints is not permitted.
15. Where hanger rods are used, the allowable stress will be 20% of the minimum yield strength of the material provided.
16. All hangers must be installed true and vertical. All suspension fitting should bear the load equally.
17. All bolts, nuts, fasteners, attachments etc, required for enclosed rail systems will be provided by **Ingersoll Rand**.
18. All double girder bridge cranes provided will incorporate diagonal bracing for parallel stabilization.
19. All splice connections shall not exceed 12”(304.8 mm) from the hanger points.

ZRS2 Curved Rail

1. Enclosed rail turns will be pre-formed by **Ingersoll Rand**. All tension tubes will be aligned and installed by **Ingersoll Rand**.
2. The radius of all enclosed rail turns will be designed to allow the carriers or trolleys to freely negotiate each horizontal turn without binding.
3. The minimum radius for ZRS2 steel rail is 60.00”(1524 mm).
4. Short radius turns with a radius that is less than the standard specified above must be pre-approved by **Ingersoll Rand**.
5. The maximum overhang of a straight track to the tangent point of a horizontal turn cannot exceed 12.00”(304.8 mm).

6. A minimum of two hangers should be used in the radius of each 90° turn, the two hangers should be in addition to one hanger at each splice joint. The maximum distance between hanger centers cannot exceed 36.00"(914.4 mm). If required, additional hangers can be provided in accordance with the design and calculated distance based on the trolley or carrier loading.
7. Special curves will be supported and braced in accordance with **Ingersoll Rand's** requirement. Under no condition will rail hanger center exceed 36.00"(914.4 mm).
8. Curved rail sections will be installed with uniform bolt tension to insure that the load trolley do not bind at splice joints.
9. A straight section of rail will be provided between each horizontal turn. For single trolley systems the length will be 12.00"(304.8 mm), for dual trolley systems the length will be 28.00"(711.2 mm).
10. All hangers provided must be installed true to the vertical plane.

Trolleys

1. All trolleys are manufactured by **Ingersoll Rand**.
2. All aluminum trolleys consist of high tensile aluminum-magnesium alloy body.
3. All steel trolleys consist of a welded, stamped steel body.
4. All trolley wheels provided for hoists, bridge cranes, and related equipments must conform to **Ingersoll Rand** standards.
5. Trolley wheels are delrin, machined symmetrically true with axis. All trolley wheels are retainer type, designed for a single row of high quality, precision-ground ball bearings. All trolley wheels have a stud that is press-fitted into trolley body.
6. Trolley side guide rollers are delrin machined symmetrically true with the axis. All trolley side guide rollers are designed for single row, ball bearings.
7. All trolleys are equipped with safety lugs so in the event of a wheel failure the trolley cannot come out of the rail.
8. All bearings are protected by grease and dust seals.

Bridge Crane Assembly • Example of How to Order

THE BRIDGE CRANE ASSEMBLY CONSISTS OF:

- ONE BRIDGE BEAM (SECTION OF RAIL)
- TWO END TRUCK ASSEMBLIES (MOUNTED TO THE BRIDGE WITH A TROLLEY TO ROLL INSIDE OF THE RUNWAY, SAFETY CABLES WILL BE PRE-INSTALLED)
- TWO END STOPS (ONE INSTALLED AT EACH END OF THE BRIDGE)
- REDUNDANT END STOPS ARE AVAILABLE (PLEASE SPECIFY)

EXAMPLE

ORDER NUMBER:

ZRS2 | 06 | 08 | 30599 | R

- REDUNDANT END STOP (OPTIONAL)** (indicated by 'R')
- END TRUCK ASSEMBLY** (indicated by '08')
- TOTAL BRIDGE LENGTH (IN FEET)** (indicated by '30599')
- SPAN (RUNWAY CENTER-CENTER DIMENSION IN FEET)** (indicated by '06')
- TYPE OF BRIDGE RAIL** (indicated by 'ZRS2')

Balancer Stack-up Dimension • For ZRS2/3 Steel Rail

Rail Systems

Miscellaneous • Components & Accessories

Safety Cable Assembly • Part No. 30907 - XX

- 1. Safety cables are to be assembled as illustrated above and installed to allow free movement of the Hanger Kit, to provide minimum free drop of the components if the primary support should fail.
- 2. The "U" bolt portion of the Wire Rope Clamp should be positioned on the dead end of the cable as shown.
- 3. Thimble must be used on both ends of the cable.
- 4. Inboard clamps should be positioned to retain thimble in place. Outboard clamps should be placed one clamp saddle width from dead end of cable.
- 5. If cable is too long, it should be cut to a suitable length.

NOTE: SEE INSTALLATION MANUAL FOR EXPLODED VIEW.

Air Supply Assembly • Runway System/Part No. 90000 - X & 90001 - X

(Dwg. 54100888)

RAIL SYSTEM AIR SUPPLY KIT

Rail systems Air Supply kits are available in 3/8" and 1/2" Hose I.D. and in 50Ft., and 100 Ft. Coverage lengths. The 90000 (3/8") or 90001 (1/2") Component Package includes the above:

Part Number	Description
90000-1	ALL RAIL SYSTEMS - 50 FOOT COVERAGE - 3/8" DIA. HOSE
90000-2	ALL RAIL SYSTEMS - 75 FOOT COVERAGE - 3/8" DIA. HOSE
90000-3	ALL RAIL SYSTEMS - 100 FOOT COVERAGE - 3/8" DIA. HOSE
90001-1	ALL RAIL SYSTEMS - 50 FOOT COVERAGE - 1/2" DIA. HOSE
90001-2	ALL RAIL SYSTEMS - 75 FOOT COVERAGE - 1/2" DIA. HOSE
90001-3	ALL RAIL SYSTEMS - 100 FOOT COVERAGE - 1/2" DIA. HOSE

Air Supply Assembly • Bridge System/Part No. 90020 - X & 90021 - X

(Dwg. 16589434)

BRIDGE CRANE AIR SUPPLY KIT

Bridge Crane Air Supply kits are available in 3/8" and 1/2" Hose I.D. and (5) lengths to suit standard bridge lengths. The 90002 (3/8") or 90021 (1/2") Component Package includes the above:

Part Number	Description
90020-1	ALL BRIDGES - 5 FOOT TO 8 FOOT LENGTHS - 3/8" HOSE
90020-2	ALL BRIDGES - 9 FOOT TO 11 FOOT LENGTHS - 3/8" HOSE
90020-3	ALL BRIDGES - 12 FOOT TO 14 FOOT LENGTHS - 3/8" HOSE
90020-4	ALL BRIDGES - 15 FOOT TO 18 FOOT LENGTHS - 3/8" HOSE
90020-5	ALL BRIDGES - 19 FOOT TO 21 FOOT LENGTHS - 3/8" HOSE
90021-1	ALL BRIDGES - 5 FOOT TO 8 FOOT LENGTHS - 1/2" HOSE
90021-2	ALL BRIDGES - 9 FOOT TO 11 FOOT LENGTHS - 1/2" HOSE
90021-3	ALL BRIDGES - 12 FOOT TO 14 FOOT LENGTHS - 1/2" HOSE
90021-4	ALL BRIDGES - 15 FOOT TO 18 FOOT LENGTHS - 1/2" HOSE
90021-5	ALL BRIDGES - 19 FOOT TO 21 FOOT LENGTHS - 1/2" HOSE
